# COTTON SITUATION

226

For Immediate Release

SEPTEMBER 1966

Stocks of all kinds of cotton reached a new high on August 1, 1966--totaling nearly 17 million bales, up about 2-1/2 million bales from the previous August. Commodity Credit Corporation stocks were the largest on record. During the 1966-67 crop year, a sharp reduction is expected in both CCC stocks and CCC stocks of cotton.

## SUMMARY

A sharp reduction in the U.S. carryover of cotton is in prospect for the 1966-67 crop year. By August 1, 1967, stocks of all kinds of cotton may be down about 3-1/2 million bales from record-high stocks of nearly 17 million on August 1, 1966. The anticipated reduction in stocks is based on an expected small crop and large disappearance.

On September 1, the 1966 crop was estimated at 11 million bales. This would be about one-fourth below last year's crop, and the smallest since 1957. Planted acreage, the smallest in nearly 100 years, was reduced sharply this year by the 1966-67 cotton program. However, production this year will not be reduced to the same extent as acreage because of an anticipated increase in yield. The indicated yield of 539 pounds per harvested acre is up from the previous year's record high of 526 pounds.

Combined mill consumption and exports of all kinds of cotton this year are expected to exceed 14-1/2 million bales--up from 12.4 million in 1965-66. Disappearance will likely be the largest since 1960-61,

when exports were 6.6 million bales. Although export prospects have weakened in recent months because increased production is now expected in foreign Free-World countries, U.S. exports this year may total around 5 million bales--a sharp recovery from last year's very small total of only 2.9 million bales. During the past year, U.S. exports dropped as a result of increased production and smaller consumption in foreign Free-World countries, and a working down of stocks abroad. Exports this year are expected to rise in response to record-high consumption in foreign Free-World countries and some rebuilding of cotton stocks abroad.

Mill consumption in the United States may show a slight increase this year from last year's large use of 9.5 million bales, which was up from 9.2 million bales in 1964-65. Domestic consumption of cotton (mill consumption plus the raw cotton equivalent of U.S. cotton textile net imports) rose more than did mill consumption during the 1965-66 crop year. Domestic consumption of all kinds of cotton rose to 10 million bales during 1965-66--up 0.5 million from 1964-65.

The export-import trade balance for cotton widened during 1965-66. Net U.S. imports of cotton textile products in 1965-66 were the equivalent of 514,000 bales--up from 321,000 bales last year. Increasing demand for textile products for civilian uses has been the primary contributor to the high level of domestic and mill use of cotton. Increasing military demand also has stimulated use. (See article beginning on page 9.)

Use of some man-made fibers in the United States increased during the past year and has remained at high levels during recent months. However, the use of rayon and acetate staple fibers on cotton-system spinning spindles has remained below year-earlier levels. This is, in part, due to reduced cotton prices. Although the use of non-cellulosic staple fibers has remained above year-earlier levels in recent months, the rate of increase in the use of these fibers has slowed. Available data and trade sources indicate that production of certain non-cellulosic fiber fabrics has increased faster than demand. This has resulted in some buildup of inventories in relation to orders and has apparently led to a cutback in fabric production and fiber consumption.

During the 1965-66 crop year, consumption of cotton linters rose about 5 percent from a year earlier. Use is expected to remain at a high level this year. Use of chemical linters rose about 11 percent last year, in response to increasing export demand for linters pulp and expanded domestic demand for pulp--particularly for use in making explosives. Felting use declined slightly.

With large use of linters this year and a sharp decline in production as a result of the small cotton crop, carryover of linters next August 1 may be reduced about 300,000 bales from beginning stocks of nearly 650,000 bales. This would mean the smallest ending carryover of linters since 1951-52 is in prospect. However, sharply higher prices for linters which occurred during the latter part of the 1965-66 crop year and possible further increases in 1966-67 may encourage some domestic users of linters pulp to turn to wood pulp or imported linters. If this occurs, the carryover of linters next August 1 may be underestimated.

## RECENT DEVELOPMENTS AND OUTLOOK

### 1967 U.S. CARRYOVER EXPECTED TO BE REDUCED SHARPLY

Combined mill consumption and exports of all kinds of cotton during the 1966-67 crop year (August 1, 1966-July 31, 1967) may exceed 14-1/2 million bales, up from 12.4 million in 1965-66. The 1966 crop is expected to total 11.0 million running bales--down about 26 percent from 1965 production of 14.9 million bales. In addition, imports and city crop (re-baled cotton) usually add about 0.2 million bales to the supply. Based on these estimates, carryover of all kinds of cotton on August 1, 1967, will total around 13-1/2 million bales--down about 3-1/2 million bales from record stocks of 16.9 million bales this past August.

Carryover increased sharply during the past crop year because of a decline in disappearance and a large 1965 crop. On August 1, 1966, the carryover was reported by the Bureau of the Census at approximately 16,862,000 bales--up about 2,572,000 bales from the previous August. Carryover at the beginning of the current crop year included about 16,574,000 bales of upland cotton and 288,500 bales of extra-long staple cotton. (See tables 10 and 11.)

### 1966 U.S. CROP SMALLEST SINCE 1957

As of September 1, the 1966 crop of all kinds of cotton was estimated at 10,968,000 running bales--down from the 1965 crop of 14,916,000 bales. It will be the smallest crop since 1957. Upland cotton accounts for

10,881,100 bales--nearly 4 million bales below the 1965 crop of 14,831,000 bales. The 1966 crop of American-Egyptian cotton, at 86,900 running bales, is up slightly from the past year's total of 85,600 bales.

The crop in upland cotton production this year primarily reflects a sharp reduction in cotton acreage, which resulted from producers diverting about 4.6 million acres of their farm allotment to soil conserving uses. The estimated yield of 539 pounds for the 1966 crop is up from last year's record high of 526 pounds and the 1960-64 average of 475 pounds. (See tables 12 and 13.)

The September 1 estimate was 172,000 bales higher than the August 1 estimate because of improved prospects in Southwestern and Delta areas, which more than offset insect damage in most other areas.

### 1966-67 COTTON EXPORTS MAY BE UP SHARPLY

U.S. cotton exports during the 1966-67 crop year are expected to total about 5 million bales--up sharply from the 2.9 million shipped during 1965-66. The expected increase reflects an anticipated recovery of foreign Free-World consumption from the slight decline in 1965-66, as well as a moderate buildup in foreign Free-World stocks during 1966-67. A small increase from 1965-66 in net imports by Communist countries is also expected in 1966-67. Very limited information now available indicates that production in foreign Free-World countries during 1966-67 may be

up about 0.5 million bales from last year. (See table 14.) Earlier indications were that production would show no increase from a year earlier.

MILL CONSUMPTION OF COTTON AT  
HIGH LEVEL; RAYON AND ACETATE  
STAPLE FIBER USE LOWER

Mill consumption of cotton during the 1966-67 crop year is expected to total around 9.6 million bales (9.5 million upland cotton and 145,000 bales extra-long staple cotton). This is up 0.1 million from 1965-66 use and will be the highest since 1950-51.

Increased consumption for 1966-67 is based on expectations for a continued high level of general economic activity, a high level of military purchases of textile products, and further gains for cotton in the domestic market because of its improved competitive price position.

The high rate of cotton consumption in recent months and the low level of mill cloth stocks in relation to unfilled orders supports the expectation of continued large mill consumption in 1966-67. The seasonally adjusted rate of use in August was slightly lower than in July but over 4 percent above August 1965. Use of rayon and acetate staple fibers has remained below year-earlier levels in recent months. Also, the rate of increase in non-cellulosic staple fibers used on cotton-system spindles has slowed, and inventories of certain man-made fiber fabrics using staple fiber have increased relative to orders.

Data furnished to the Department of Agriculture by the Defense Supply Agency indicate that military purchases of cotton fabric have remained at high levels during recent months. The raw cotton content of actual deliveries of cotton fabric during January-July 1966 amounted 71,000 bales--an annual rate of around 120,000 bales. Deliveries amounted to an estimated 99,000 bales of cotton in 1965. Military purchases of man-made and wool fabrics also have been at high levels in recent months. (See article beginning on page 9.)

CCC STOCKS LARGE

Stocks of all kinds of cotton totaled 16.9 million bales on August 1, 1966--up 2.6 million bales from the previous August. Of this total, Commodity Credit Corporation owned 12.3 million bales--up only 0.7 million from August 1, 1965. Privately-owned stocks increased sharply during 1965-66, primarily reflecting sales of cotton by CCC during the latter part of the year under NO-C-31 for delivery after July 31. (See table 1.) Mill stocks of cotton declined slightly during the 1965-66 crop year, probably reflecting an expected decline of about 2 cents a pound in the effective price of cotton for domestic use during the 1966-67 crop year. (See table 2.)

Table 1.--Cotton, all kinds: Stocks held  
by CCC and others, United States,

1/ Includes cotton pooled, owned, loans outstanding and cotton released from the stockpile. Foreign stockpile cotton included by the Bureau of Census as of August 1 was 7,168 bales in 1962, 61,168 bales in 1963, 27,474 bales in 1964, 18,307 bales in 1965 and 12,500 bales in 1966.

2/ Running bales.

3/ Preliminary.

RATIO OF MILL STOCKS OF COTTON FABRIC TO  
UNFILLED ORDERS BELOW YEAR EARLIER

The seasonally adjusted ratio of mill stocks to unfilled orders for cotton cloth has remained at a low level in recent months. The ratio at the end of July was 0.17--same as for June, but below the 0.21 for July 1965. (See table 3.) The ratio has trended downward from 0.54 in April 1964, to a low of 0.16 in April of 1966. Changes in the ratio usually precede by several months changes in the rate of cotton consumption, with declines in the ratio indicating increases in the rate of cotton consumption.

Mill inventories of cotton cloth have remained at low levels in recent months. Stocks at the end of July were down slightly from June and 8 percent below July 1965. The rate of increase in unfilled orders has slowed

in recent months but orders have remained well above the same months in 1965.

Table 2.--Cotton, all kinds: Stocks by locations, at beginning of season, United States, 1950 to date

CLOTH PRICES HIGHER IN 1965-66; SERIES TO BE REVISED

The average wholesale value of the fabric (20 constructions) made from a pound of cotton during the 1965-66 crop year was 65.15 cents--up from 62.98 cents for 1964-65. (See table 18.)

The average price paid by mills for raw cotton used in making the various constructions during the 1965-66 crop year averaged 26.49 cents per pound--down almost 1 cent from the 27.23 cents for the previous year.

Mill margins (the spread between the average price paid for cotton and the wholesale value of fabric made from a pound of this cotton) averaged 38.66 cents for 1965-66--up from 35.75 cents for 1964-65.

Table 3.--Cotton broadwoven goods at U.S. cotton mills: Ratio of stocks to unfilled orders, seasonally adjusted, January 1963 to date 1/

1/ End of month.

Based on data from American Textile Manufacturers Institute, Inc.

A new series on cloth prices, raw cotton prices, and mill margins is being developed by the Consumer and Marketing Service of USDA. It will cover a larger number of fabric constructions than the old series. Each group of constructions of cloth will be weighted by its production in deriving mill margin data. Also, the qualities of cotton used in the raw cotton price series will reflect more accurately the fabric produced. The new series will begin with August 1966 data and will appear in future issues of the Cotton Situation. The old series also will be published and appear in the Cotton Situation for the 1966-67 crop year.

COTTON TEXTILE IMPORTS AT RECORD HIGH

U.S. imports of cotton textiles, on a raw cotton equivalent basis, totaled a record 894,400 bales during the 1965-66 crop year. This is 30 percent above the 688,300 equivalent bales imported in 1964-65. The increased demand for cotton textiles in the domestic market has contributed to the high level of cotton textile imports. Imports have continued at a high level in recent months, while exports have remained at low levels. (See tables 19 and 20.)

For the 1965-66 crop year, imports of cotton textiles exceeded exports by over 500,000 equivalent bales--a record high. Thus, the equivalent final domestic use of raw cotton was 0.5 million bales larger than the 9.5 million bales processed by domestic textile mills (mill consumption). Net imports of cotton textiles in 1964-65 totaled 0.3 million bales and final domestic consumption in 1964-65 was 9.5 million bales. (See table 4.)

Table 4.--U.S. foreign trade in cotton textiles, mill and domestic consumption of cotton, crop years, 1963, 1964 and 1965

Item	Year Beginning August 1		
	1963-64	1964-65	1965-66
	1,000	1,000	1,000

1/ Cotton equivalent of raw cotton in 500-lb. gross weight bales. 2/ Import trade balance. 3/ All kinds of cotton, running bales.

#### SPOT MARKET PRICE DECLINES SHARPLY

The average spot market price for Middling 1-inch cotton during August was 22.04 cents per pound, down from 29.60 cents in July and 29.98 for August 1965. (See table 5.) This sharp decline in price reflects the lower level of price support for the 1966 crop. However, with the elimination of equalization payments of 5.75 cents per pound during the 1966-67 crop year, the effective price for domestic and export uses is down only about 2 cents per pound this year.

The average spot market price for the 1965-66 season was 29.60 cents per pound, down from 30.73 cents for 1964-65. The basic support price for the 1966 crop of middling 1-inch cotton at average location is 21.00 cents per pound, down from 29.00 cents for the 1965 crop and 30.00 cents for the 1964 crop.

The average price received by farmers for upland cotton in mid-August was 21.17 cents per pound, down from 29.87 cents in mid-July and 28.90 cents for August 1965. (See table 6.) The support price for the 1966 crop of upland cotton (average of the crop) is 20.21 cents per pound compared with 28.31 for 1965. In addition to the basic price support loans, most producers are receiving direct price support payments and acreage diversion payments.

#### U.S. COTTON EXPORTS TO MOST COUNTRIES DECLINED IN 1965-66

U.S. exports of cotton totaled 2,942,000 bales for the 1965-66 crop year--28 percent below the 4,060,000 bales exported in 1964-65. U.S. cotton exports to all but 6 of the major importing countries declined during 1965-66. Of these 6 countries only 4 (Sweden, Yugoslavia, Columbia and Korea) imported over 50,000 bales from

1/ Weighted average. 2/ Not available. Statistical Reporting Service.

the United States. Korea, Yugoslavia, and Columbia cotton imports from the U.S. were each 40,000 to 60,000 bales above 1965-66. Most of the increase in Korea and

Yugoslavia reflected higher shipments under P.L. 480 programs.

U.S. cotton exports to most European countries dropped sharply (36 percent) in the 1965-66 season as European stocks were worked down and consumption of cotton slowed. Exports to these countries totaled about 875,000 bales and accounted for about 30 percent of total U.S. cotton exports during 1965-66--down from 1.4 million bales and 34 percent for 1964-65. (See tables 21 and 22.)

U.S. cotton shipments to other countries declined by 23 percent during the past year. Japan, the largest importer of U.S. cotton, accounted for about 705,000 bales or 24 percent of total U.S. exports. This was the same percentage as a year earlier, although U.S. exports to Japan were down 285,000 bales from the previous year.

#### FOREIGN FREE-WORLD COTTON PRODUCTION AND CONSUMPTION HIGHER

Foreign Free-World cotton production for 1966-67 is estimated by the Foreign Agricultural Service at about 23.8 million bales--up about 500,000 bales from 1965-66. Cotton consumption in foreign Free-World countries is expected to reach a record 26 million bales in 1966-67--up from 24.8 million bales for 1965-66. (See table 14.)

Net imports from the foreign Free-World countries by Communist countries are expected to total about 2.2 million bales during 1966-67. This would be up about 200,000 bales from 1965-66.

#### COTTON PRICES LOWER IN IMPORT MARKETS

Prices for most qualities of cotton in major import markets have weakened slightly in recent months. The price for U.S. middling 1-1/32 inch, C.I.F. Liverpool, during August averaged 25.63 cents per pound compared with 25.64 cents in July and 26.87 cents in August 1965. Prices for U.S. cotton are generally below the same grade and staple of foreign-grown cotton. (See tables 23 and 24.)

U.S. and foreign average spot export prices are shown in table 25.

#### COTTON LINTERS USE UP

Consumption of cotton linters in the United States during the 1965-66 marketing year totaled 1,453,000 running bales--about 5 percent larger than the 1,386,000 bales

consumed in 1964-65. This was the largest consumption of cotton linters since the record high 1,789,000 bales consumed in the 1955-56 marketing year.

This increased consumption during the 1965-66 year resulted from an 11 percent rise in the use of chemical linters, while felting linters use declined slightly. Use of chemical linters rose in response to increasing export demand for linters pulp and expanded demand for pulp in the domestic market, particularly for use in making explosives.

Exports of cotton linters during 1965-66 totaled 283,000 bales--down 6 percent from the previous season. Linters imports during 1965-66 totaled 192,500 bales--26 percent above 1964-65. (See table 26.)

U.S. carryover of cotton linters on August 1, 1966, totaled 646,800 bales--4 percent below the 671,100 bales a year earlier. Production of cotton linters during 1966-67 is expected to total about 1,200,000 bales--nearly 25 percent below 1965-66. This expected sharp decline in linters production reflects the reduced cotton acreage and production for the 1966-67 crop year. Imports of cotton linters during 1966-67 are expected to increase slightly, while exports may decline slightly. This would result in an August 1, 1967, carryover about 300,000 bales below August 1, 1966.

#### PRICES FOR LINTERS HIGHER

Prices of linters have increased sharply during recent months, due in part to anticipated reduced output during the 1966-67 season. The price for Grade 4 Staple 4 linters, for example, was 5.92 cents a pound in December 1965, then increased to 7.00 cents in March and 7.75 cents in August 1966--the highest since March 1957.

Prices for chemical linters (73 percent cellulose) remained at 2.50 cents a pound during the first 7 months of the 1965-66 season then increased to 4.00 cents in March, where they stayed for the balance of the season. During August 1966, the price for chemical linters increased to 5.06 cents a pound--over a 100 percent price increase from the previous August. (See table 27.)

If prices for linters continue to increase in 1966-67, some domestic users of linters pulp may turn to wood pulp or imported linters. This could lead to increased supply of linters in relation to demand, and the ending carryover of linters could be larger than estimated.

## FIBERS USED IN TEXTILES DELIVERED TO THE MILITARY FORCES

by

Charles H. Wittmann and James R. Donald\*

Beginning with this issue of the Cotton Situation, data will be regularly published on monthly deliveries of textile products to the military forces.

In this article, data are presented on a monthly basis for the period January 1961 through July 1966.<sup>1/</sup> Data included represent fabrics delivered to the military, plus such household articles as sheets, pillowcases, blankets, towels, mattress covers, etc.

Finished items such as apparel, tents and tarpaulins, bags, and parachutes are not included in this analysis. Work is underway to determine the amount of fibers contained in these items. When available these data will be included in later reports. These items will represent contractor-furnished fabrics only, to avoid duplication in reporting data on Government-furnished fabric which are already included in the military-use data. However, it is believed that contractor-furnished fabric for the above items--apparel, etc.--represent only 10 to 15 percent of the fiber equivalent of all textile items delivered to the Military Forces.

### DERIVATION AND PRESENTATION OF TEXTILE DELIVERY DATA

In deriving the fiber poundage data presented in table 8, conversion factors were developed for each item reported to have been delivered for use by the military forces. The conversion factor for each item takes into account the weight, width, fiber content (by percent of each fiber in blend fabrics) of the basic fabric construction involved. Also, the following waste allowances for manufacturing the various fiber fabrics were used in developing the conversion factors: cotton 12 percent, wool 5 percent, man-made fiber filament yarn 1.5 percent, and man-made staple fiber 4 percent.

Individual fabric tables, in equivalent square yards, were developed to represent 100 percent cotton, wool, and man-made fiber fabrics, and fabric mixtures.

While broadwoven fabrics are predominant in military uses of textiles, knit fabrics and narrow fabrics (such as webbing) also are used. When reported, these items were included, but are shown separately.

### CHANGES IN USE OF TEXTILES

The total raw fiber content of deliveries in 1966 (projected for the year on the basis of data for 7 months)

is estimated at about 76 million pounds of fiber. This is about 25 percent higher than the 1965 level and about 20 percent above the early 1960's. In July 1966, deliveries jumped sharply and were the highest since the beginning of monthly data in 1961. Military uses have generally averaged about 1 percent of total mill consumption of fibers. (See table 7.)

Of the individual fibers, cotton accounts for the major proportion of total military use. However, cotton's percentage of the total has declined slightly since the early 1960's--from 84 percent of the total in 1961 to about 78 percent in 1965. Man-made fibers' share of the total increased from 3 percent in 1961 to 9 percent in 1965, while wool's share (about 13 percent) showed little change.

### IMPORTANCE OF INDIVIDUAL FABRIC CONSTRUCTIONS

Military use of cotton fabrics totals about 40 constructions, of which the 25 major ones are shown. Of these, ducks, poplins, twills, sateens, and sheetings are predominant, accounting for about 87 percent of total cotton fabric used in 1965. The important wool fabrics are meltons, serges, and blanketings, accounting for 93 percent in 1965. Netting and parachute fabrics accounted for 82 percent of total man-made fabric use in 1965. (See table 9.)

The mixed fiber or blended fabrics group was classified according to type of fiber. Use of cotton and non-cellulosic fiber blends predominated (48 percent), with wool and non-cellulosic blends next (35 percent). Cotton and non-cellulosic blends have increased in recent years. For individual constructions, poplins, sateens, twills, woolens, and tropicals were the most important.

---

\*The authors are Analytical Statistician and Agricultural Statistician, respectively, Economic and Statistical Analysis Division, Economic Research Service.

<sup>1/</sup> Quarterly data for the third quarter of 1954 through the second quarter of 1961 were developed by Frank Lowenstein, formerly with the Economic Research Service, and now with the Staff Economists Group, USDA, and are contained in the November 1957 and September 1961 issues of the Cotton Situation, although these two series are not strictly comparable.

FUTURE AVAILABILITY OF DATA

The project of converting military uses of textiles to square yards and to equivalent pounds of raw fiber is being programmed for automatic data processing. In

future months, details giving conversion factors, information about coated fabrics, and data regarding fiber blends will be maintained on file for the approximately 2,000 items used by the military forces.

1/ August 1 estimate.  
2/ Production ginned and to be ginned.  
3/ Bales of 500 pounds gross weight. A 500-pound bale contains about 480 net pounds of lint.  
4/ Includes Virginia, Florida, Illinois, Kentucky, Kansas, and Nevada.  
5/ Included in State and United States totals.

1/ The estimated value of cloth obtainable from a pound of cotton with adjustments for salable waste.  
 2/ Monthly average prices for four territory growths, even running lots, prompt shipments, delivered at Group 201 (Group B) mill points including landing costs and brokerage. Prices are for the average quality cotton used in each kind of cloth. Beginning August 1964, prices are for cotton after equalization payments of 6.5 cents per pound have been made. The mill margins shown for April-July 1964 do not reflect the 6.5 cents per pound equalization payment made to domestic cotton users on all bales of eligible cotton opened beginning 12:01 A.M. April 11, 1964, through July 31, 1964 (5.75 cents beginning August 1965.)  
 3/ Markets closed.  
 4/ Difference between cloth prices and cotton prices.

SEPTEMBER 1966

1/ Includes fabrics and tire cord and cloth for export to the Philippines to be embroidered and otherwise manufactured and returned to the United States. 2/ Includes tap-estry and upholstery fabrics, table damask, pile fabrics and remnants. 3/ Includes curtains and draperies, house furnishings not elsewhere specified. 4/ Includes gloves and mitts of woven fabric. 5/ Includes underwear and outerwear of woven fabric, handkerchiefs, and wearing apparel containing mixed fibers (corsets, brassieres, and girdles, garters, armbands and suspenders, neckties and cravats). 6/ Includes canvas articles and manufactures, knit fabric in the piece, braids and narrow fabrics, elastic webbing, waterproof garments, and laces and lace articles. 7/ Includes rubberized fabrics, bags, and industrial belts and belting. 8/ 480 pound net weight bales. 9/ For monthly data beginning July 1959, see the Cotton Situation, CS-199, March 1962 and CS-209, November 1963; for annual data prior to 1960, see Statistics on Cotton and Related Data, 1925-62, issued April 1963. 10/ Monthly data may not always agree with the annual because of rounding and minor revisions in the annual report. 11/ Preliminary.

Beginning January 1, 1965, a new classification system for exports was adopted by the Bureau of the Census. Minor differences from earlier groupings may occur because of composition changes. Compiled from reports of the Bureau of the Census.

<sup>1/</sup> The equivalent net weight pounds of raw cotton for each pound of manmade fibers are: a, Regular and intermediate tenacity rayon and acetate filament yarn--1.51; b, Rayon and acetate staple fiber--1.10; c, High tenacity rayon--1.80; d, Non-cellulosic manmade fiber for uses other than tires--1.74; e, Non-cellulosic manmade fibers used in tires--2.73; f, Non-cellulosic manmade staple fiber--1.37; g, Fiber glass--1.70.

<sup>2/</sup> Totals were made from unrounded data. <sup>3/</sup> 480 pound net weight bales.

Based on production data from the Textile Organon, a publication on the Textile Economics Bureau, Incorporated.

## LIST OF TABLES

<u>Table</u>	<u>Title</u>	<u>Page</u>
	Situation at a Glance .....	2
1	Cotton, all kinds: Stocks held by CCC and others, United States, 1950 to date .....	5
2	Cotton, all kinds: Stocks by locations, at beginning of season, United States, 1950 to date .....	6
3	Cotton broadwoven goods at U.S. cotton mills: Ratio of stocks to unfilled orders, seasonally adjusted, January 1963 to date .....	6
4	U.S. foreign trade in cotton textiles, mill and domestic consumption of cotton, crop years, 1963, 1964 and 1965 .....	7
5	Cotton: American Middling 1-inch price per pound at U.S. 15 markets, monthly average, August 1963 to date .....	7
6	Cotton: American upland, average price per pound received by farmers, by months, August 1963 to date .....	7
7	Fibers used by the military forces: Total fibers used as a percent of mill consumption, by major fiber, 1961 to 1966 .....	10
8	Textile fabrics: Deliveries to U.S. military forces, raw fiber content, by major fiber, by months, 1961 to date (2 pages) .....	11
9	Textile fabrics: Deliveries to U.S. military forces, by major fiber in equivalent square yards of fabric, by months, 1961 to date (6 pages) .....	13
10	Cotton other than extra-long staple: Supply and distribution, United States, 1950 to date .....	19
11	Extra-long staple cotton: Supply and distribution, United States, 1950 to date .....	19
12	Cotton: Acreage, production and yield forecast, by States, crop of 1966 with comparisons .....	20
13	Cotton: Acreage, planted and harvested, and yield per acre on harvested acreage, by regions, 1950 to date .....	21
14	Cotton: Supply and distribution in the foreign Free World, 1963-64 to 1966-67 (August-July marketing year) .....	22
15	Special programs of the U.S. Government for financing cotton exports: Fiscal years 1963-64 to 1966-67 .....	22
16	Upland cotton: Daily rate of mill consumption, unadjusted and seasonally adjusted, August 1963 to date .....	23
17	Man-made staple fiber: Daily rate of mill consumption by cotton-system spinning spindles, unadjusted and seasonally adjusted, August 1963 to date .....	23
18	Price of unfinished cloth (20 constructions), price of raw cotton, and mill margin, United States, by months, 1950 to date .....	24
19	Raw cotton equivalent of United States imports for consumption of cotton manufactures, 1961 to date .....	25
20	Raw cotton equivalent of United States exports of domestic manufactures, 1961 to date .....	26
21	Cotton: Exports by staple length and by countries of destination, United States, June and July 1965 and cumulative since August 1, 1964 .....	27
22	Cotton: Exports by staple length and by countries of destination, United States, June and July 1966 and cumulative since August 1, 1965 .....	28
23	Cotton: Average prices of selected growths and qualities, c.i.f. Liverpool, England, annual 1962-65, January-August 1966 .....	29
24	Cotton: Average prices of selected growths and qualities, c.i.f. Bremen, Germany, annual 1962-65, January-August 1966 .....	29
25	Foreign spot prices per pound including export taxes and U.S. average spot export prices, 1965-66 crop year, and July and August 1966 .....	30
26	Cotton linters: Supply and disappearance, United States, averages 1935-39, 1940-44, 1945-49 and 1950 to date .....	31
27	Prices for specified qualities of cotton linters, by months, 1965 to date .....	32
28	Cotton equivalent: Production of man-made fibers, 1954 to date .....	33
